WHEAT BIDS MIXED AND CORN BIDS HIGHER

PACIFIC NORTHWEST MARKET SUMMARY: Cash wheat bids for January delivery ended the reporting week on Thursday, January 10, mixed compared to week ago bids for the same delivery period. Soft white wheat bids trended mixed, while bids for hard red winter wheat and dark northern spring wheat moved lower.

March wheat futures ended the reporting week on Thursday, January 10, lower as follows compared to last Thursday's closes: Chicago 11 cents lower at 7.4450, Kansas City 14.75 cents lower at 7.9650 and Minneapolis 7.25 cents lower at 8.3925. Chicago March corn futures trended 9.50 cents higher at 6.9875 while March soybean futures closed 6.75 cents lower at 13.7975. On Friday, a higher US Dollar against foreign currencies and on Wednesday heavy rainfall in the US southwestern plains pressured wheat futures lower for the week. A better-than-expected inspected-for-export figure of 13.4 million bushels (mb) for the week ending January 3 and a lower US Dollar on Monday lent some support to the wheat futures. Soybean futures were slightly lower for the week. Good weather in most of South America and some cancellations of US soybean export sales weighed on soybean futures on Friday. On Monday, a good inspected-for-export figure of 39.7 mb and commercial buying were supportive to soybean futures. Corn futures were higher for the week in reaction to spill-over support from higher soybean futures on Monday, good export demand and commercial buying. Grain futures all did some position squaring this week in front of tomorrow (Friday's) USDA Supply and Demand Report.

Pacific Northwest Market Summary: (continued)

Bids for **US 1 Soft White Wheat** delivered to Portland in unit trains or barges during January trended mixed, from one cent lower to five cents per bushel higher than week ago bids for January.

Bids for 11.5 percent protein **US 1 Hard Red Winter Wheat** for January delivery fell by 9.75 to 11.75 cents per bushel compared to last Thursday's noon bids for January delivery in following the lower Kansas City March wheat futures. On Thursday, bids were as follows: January 8.8650-8.9650, mostly 8.9250; February 8.9350-9.0150; March 8.9950-9.0450; April 9.0150-9.0850 and May 9.0650-9.1150.

Bids for non-guaranteed 14.0 percent protein **US 1 Dark Northern Spring Wheat** for January Portland delivery declined by 7.25 cents per bushel compared with last week's noon bids in lining up with the lower Minneapolis March wheat futures. Protein scales for non-guaranteed 14.0 percent protein were plus zero cents each 1/4 of a percent of protein up to 16 percent protein and minus four to seven cents each 1/4 of a percent of protein down to 13 percent protein. On Thursday, bids for non-guaranteed 14 percent protein were as follows: January 9.2425-9.3425, mostly 9.2925; February 9.2925-9.4025; March 9.2925-9.4625; April 9.4025-9.4725 and May 9.4025-9.5125.

Pacific Northwest Export News: There were 16 grain vessels in Columbia River ports on Thursday, January 10 with four docked compared to 11 last Thursday with four docked. There were no new confirmed export sales of grain for Pacific Northwest loadout during the week.

Cash Soft White Wheat: Bids for US 1 Soft White Wheat, delivered by unit trains and barges to Portland during January ended the reporting week on Thursday, January 10, as 8.2950-8.45, mostly 8.36, mixed, from one cent lower to five cents per bushel higher compared to last Thursday's bids for January delivery of 8.3050-8.40, mostly 8.3725. There were no white club wheat premiums for nearby delivery for this week or last week. One year ago bids for US 1 Soft White Wheat and white club wheat for January delivery were 6.10-6.30, mostly 6.25. Nearby bids for US 1 Soft White wheat began the reporting week on Friday at mostly 8.3125, rose to mostly 8.3650 on Monday, and to mostly 8.3950 on Tuesday, before falling to mostly 8.3675 on Wednesday. Today (Thursday), the reporting week's close, bids moved slightly lower again to mostly 8.36. There were no new confirmed export sales of white wheat this week. Forward month bids for soft white wheat were as follows: February 8.3450-8.55, March 8.3950-8.55, April 8.4350-8.55 and May 8.4350-8.56. One year ago, forward month bids for soft white wheat were as follows: February 6.25-6.35, March 6.34-6.40, April 6.36-6.40 and May 6.38-6.40.

Outstanding U.S. white wheat export sales as of January 3, 2013 for the marketing year beginning June 1, 2012 and ending May 31, 2013, totaled 1219.5 thousand MT compared to 1256.6 thousand MT on December 27, 2012, and 1132.6 thousand MT one year ago. Outstanding white wheat export sales for the 2012-2013 marketing year were to the following countries in 1000 MT: Japan 277.0, South Korea 167.0, Egypt 165.0, Philippines 163.0, Thailand 62.5, China (Main) 55.5, Yemen 50.0, Nigeria 30.4, Taiwan 18.2, Vietnam 2.6, Canada 2.1, Mexico 1.8, Burma 1.5, Malaysia 1.5, Hong Kong 1.2 and total unknown 220.2. Accumulated white wheat export shipments as of January 3, 2013, in 1000 MT for the 2012-2013 marketing year, totaled 2587.3 compared to 2965.5 one year ago.

Outstanding U.S. barley export sales as of January 3, 2013 for the marketing year beginning June 1, 2012 and ending May 31, 2013, in 1000 MT, totaled 1.1 compared to 1.1 on December 7, 2012 and 0.0 one year ago. Outstanding barley export sales for the 2012-2013 marketing year in 1000 MT were to the following countries in 1000 MT: Japan 0.8 and Taiwan 0.3. Accumulated barley export shipments as of January 3, 2013 were 120.2 thousand MT compared to 82.6 one year ago.

Coarse Feeding Grains: Bids for **US 2 Yellow Corn** delivered to Portland in single rail cars were 293.00-294.25, 3.25 to 4.50 per ton higher than last Thursday's bids of 289.75. Bids for US 2 Yellow Corn truck delivered to the inland feeding areas of Yakima, Washington, and Hermiston, Oregon were 287.75-297.75, 3.50 to 4.00 per ton higher than last Thursday's bids of 284.25-293.75. Bids for **US 2 Heavy White Oats** for January delivery held steady with last Thursday's noon bids at 265.00.

WHEAT: Cash closing bids for wheat delivered to the Pacific Northwest in dollars per bushel for nearby delivery.

NATIONAL AGRICULTURAL SUMMARY Dec 31, 2012-Jan 6, 2013 USDA, NASS Released 1/8/2013

Near-normal temperatures prevailed across much of the country during the week, while readings averaged more than 20°F below normal in parts of the Great Basin and Rocky Mountains. Above-average precipitation was mostly limited to the south-central United States, where portions of Louisiana and eastern Texas received more than 3 inches of rain.

In Florida, warm weather coupled with light, scattered rainfall provided producers ample time to harvest citrus, sugarcane, and vegetables. Moisture received in recent weeks aided small grain growth, and boosted soil moisture levels in fields prepared for spring crops. Following prolonged exposure to unseasonably high temperatures, bud development was evident on a variety of trees, with avocados, mangos, and peaches already in bloom. In Dixie County, pecan trees were stressed due to above-average temperatures, while late blight was reported in some potato and tomato fields. Early and mid-season citrus crops continued to be harvested at a heavy pace. With the exception of pre-harvest moving and irrigation, and general orchard maintenance, producer activity was light.

Dry, chilly weather gave way to widespread, light precipitation across California by week's end. Small grain development slowed due to steadily below-average temperatures in recent weeks; however, condition ratings remained mostly good to excellent due to beneficial moisture. Winter forage harvest in the Central Valley was complete. Fruit growers applied fumigants, herbicides, and pesticides to vineyards and stone fruit orchards. Apples and a variety of citrus crops continued to be harvested. Dormant sprays were completed in nut orchards. Adequate soil moisture aided winter vegetable growth, as broccoli, carrots, cauliflower, and lettuce were harvested.

INTERNATIONAL WEATHER AND CROP SUMMARY NOAA/USDA JOINT AGRICULTURAL WEATHER FACILITY

Washington, D.C.

Dec 30, 2012-Jan 5, 2013

Released 1/9/2013

- EUROPE:** Mild, wet weather continued, maintaining generally favorable conditions for dormant winter crops in central and northern Europe.
- FSU-WESTERN:** A fresh snowfall afforded winter crops additional protection against potential incursions of bitter cold.
- MIDDLE EAST:** Warm weather kept most crop areas devoid of a protective snowpack.
- NORTHWEST AFRICA:** Showers across central and eastern crop areas improved soil moisture for vegetative winter wheat and barley.
- SOUTHEAST ASIA:** Widespread showers boosted moisture supplies for rice across Java, Indonesia, while Tropical Cyclone Sonamu brought heavy rainfall to the southern Philippines.
- AUSTRALIA:** Hot, dry weather favored late winter wheat harvesting but increased irrigation requirements for summer crops.
- SOUTH AFRICA:** Warm, showery weather maintained overall favorable conditions for rain-fed summer crops.
- ARGENTINA:** Warm, mostly dry weather aided late fieldwork in sections of central Argentina.
- BRAZIL:** Beneficial rain continued in most major soybean areas, with pockets of warmth and dryness confined to more minor production areas of the northeastern interior.

EUROPE: Mild, showery weather persisted, maintaining favorable conditions for winter grains and oilseeds. A pair of Atlantic storms produced occasional showers (5-25 mm) from northern France and southern England into western Poland and the northern Balkans, boosting soil moisture reserves for dormant winter crops. Temperatures averaged up to 7°C above normal in northern Europe, keeping growing areas devoid of snow cover. In southern Europe, light to moderate showers (2-15 mm) benefited winter wheat and barley in Spain and northern Italy but was not heavy enough to delay citrus harvesting.

WESTERN-FSU: A fresh snowfall along with somewhat milder weather benefited winter grains. Light to moderate snow (2-12 mm liquid equivalent) provided dormant winter crops additional insulation from potential incursions of bitter cold. By week's end, most primary winter wheat areas were under at least 5 cm of snow, with bare areas confined to the southwestern corner of the Southern District. Temperatures averaged 1 to 3°C above normal, minimizing the risk for any additional freeze damage or winterkill.

SOUTHEAST ASIA: Heavy showers prevailed across Java, Indonesia, following a slow start to the rainy season; however, moisture conditions were near normal in all growing areas for the first time this season. Widespread seasonable rainfall (100-200 mm) boosted moisture supplies for vegetative to reproductive rice and improved crop prospects. Oil palm in Indonesia and Malaysia also benefited from rainfall totals ranging from 50 to 200 mm. Some areas, however, experienced severe flooding with localized rainfall amounts approaching 500 mm for the week. Meanwhile, Tropical Cyclone Sonamu formed off the southwestern islands of the Philippines late in the period, producing over 200 mm of rain in portions of Mindanao. With the recent rain, moisture availability remained high for winter rice and corn throughout the southern half of the Philippines.

AUSTRALIA: In western and southeastern Australia, hot, dry weather favored winter wheat harvesting, allowing fieldwork to continue without delay. Reports indicated harvesting is rapidly approaching completion in western and southern Australia, and that harvesting has already concluded across much of eastern Australia. In northern New South Wales and southern Queensland, hot, mostly dry weather elevated evaporation rates, increasing irrigation requirements for cotton and reducing soil moisture for dry land summer crops, including sorghum. Temperatures in major summer crop producing areas averaged 1 to 2°C above normal, with maximum temperatures generally in the middle to upper 30s (degrees C). In western and southeastern Australia, temperatures averaged 3 to 4°C above normal, with maximum temperatures in the lower 40s degrees C in most areas.

ARGENTINA: Rainfall tapered off across southern farming areas, aiding seasonal fieldwork even though some areas remained excessively wet from lingering patches of standing water. Rainfall totaled 10 to 25 mm in Buenos Aires and most of La Pampa, spurring the final stages of corn and soybean planting as well as harvesting of winter wheat and barley. Similar amounts were recorded from Cordoba to southern Entre Rios, where little to no rain fell last week. Weekly temperatures averaged several degrees C above normal, with daytime highs ranging from the lower 30s (degrees C) in southeastern Buenos Aires to the middle 30s farther north and west. Wet weather continued in eastern sections of northern Argentina, with rainfall in excess of 25 mm stretching from northern Entre Rios and northern Santa Fe northeastward through Paraguay and southern Brazil. Drier conditions prevailed farther west (Santiago del Estero northward), where daytime highs again reached 40°C. According to Argentina's Ministry of Agriculture, corn and soybeans were 85 and 90 percent planted, respectively, as of January 3, lagging last year's pace for both crops. Winter wheat was 82 percent harvested, an increase of 12 points from last week but still 8 points behind last year. In Buenos Aires, Argentina's largest producer of wheat, harvesting advanced 21 points, although progress was 20 points behind last year at 66 percent complete.

BRAZIL: Beneficial rain continued in the main soybean production areas of southern and central Brazil. Rainfall totaled 25 to 100 mm over a broad area stretching from Rio Grande do Sul to Mato Grosso, maintaining generally favorable levels of moisture for soybeans, corn, and other summer crops. The rain spread eastward into Sao Paulo and southern Minas Gerais, benefiting sugarcane and coffee, as well as southern sections of Goias. Weekly average temperatures were 1 to 2°C above normal in these areas, with daytime highs ranging from the lower 30s (degrees C) in the south and in the mid and upper 30s in the traditionally warmer locations of Mato Grosso. Elsewhere, drier conditions continued to dominate the northeast, with little to no rain falling from Espirito Santo and central Minas Gerais to Tocantins. The continuation of unseasonable warmth (daytime highs reaching the middle and upper 30s) and dryness in the northeastern interior further limited moisture for normal development of soybeans and cotton. The dryness along the coast fostered harvesting of sugarcane and cocoa, although additional moisture would be welcome following a drier-than-normal winter.
